5 - Enter any additional comments here

Response Rate 13/164 (7.93%)

- Did not learn as the problems were hard to approach with very little guidance on the smaller ways to improve like how to tackle the basics
- Just horrible. I think it is safe to say that this is the single worst class I have taken at Columbia. The lecture is useless, and the instructor pretends to care about students, but imposes unreasonable rubric that even the TAs cannot understand. He also constantly threatens students with giving out F when some small expectations are not met. Avoid at all cost.
- Workload was a bit much.
- For fairness of grading: the most amount of points for the course could be attained by doing division 1 contests, however those were only available to students that had a high ranking.
- I learned a lot of problem solving skills and algorithm. It benefits me a lot.
- Workload was high but it was enjoyable, and it was clear from the start what it would be like.
- Course felt very scary at first, due to inexperience with CodeForces. Talking with Prof Lim + the follow up opportunities for practice (and points) really helped me quell anxiety with this class.
- The syllabus was very unstructured, the professor would constantly change the syllabus throughout the course. The professor barely teaches, he puts a difficult problem about topics we just learned a few seconds before via bullet points and copy and pasted text from the internet. He then gives us 10 minutes to solve the problem, 9/10 times no one knows the answer. He moves on and reads a solution which he describes for a few minutes and he repeats. The other half of the class he talks about the logistics of the course and his expectations, no actual material is covered. It may seem he is good in terms of rating and feedback, but that is only because he rewards students via points in the class to give him feedback. He encourages to give him positive feedback at that. The professor barely puts time into the course and he is using this course to build up 'reputation' for his consulting company in which he charges outside students and families to help them 'succeed' in computer science accolades they wish. He uses this course and other courses to build relationships with promising students who make it in industry and just because he speaks with these students a few times, he takes their credit and uses it to build his portfolio for his company. To show his level of professionalism, I have been called incompetent by him multiple times this semester. He does not deserve to teach here as he gives very little value to the Columbia community.
- I wish grading wasn't so confusing
- Thanks Yuanhan for helping me so much this entire semester!
- Grading scheme was difficult to understand.
- The course could be more organized
- I love the live tracker for the total score. Also the professor he is so inspiring and is always so ready to help. It was an absolute pleasure taking this course.

11 - If so, please explain why

Yongwhan Lim

Response Rate	22/164 (13.41%)
---------------	-----------------

- responsible
- Prof. Lim is very passionate in teaching this course and he is so knowledgeable and supportive in our learning.
- Knowledgeable
- Good lecture and well prepared slides
- Always approachable, helpful and enthusiastic.
- He's the greatest guy ever! So approachable!
- Because he's brilliant and respond to our questions timely.
- Yongwhan is the simply one of the best professor. He really enjoys competitive programming, and you can simply reach out to him for any questions. He knows the materials well, and the lectures are very engaging.
- Knowledgeable, caring, courses are great for everyone who likes to code.
- According to the definition of this award, it's given to "faculty of unusual merit across a range of professorial activities...with a primary emphasis on the instruction and mentoring of [students]." That is the exact embodiment of Yongwhan. I've never seen, met or heard of a professor who cares as much about the material or his students as him. His commitment to the students goes beyond simple scholarship—he goes out of his way to set us up for success even in job searches. I wouldn't be surprised if he has single handedly brought up the Columbia Graduate employment rate. This is definitely one of the best classes I've ever taken and I've seen personal growth that I never thought I would have. Before this class, I tried a single Codeforces problem and didn't even know how to submit the answer, let alone solve it. Now, my rating has increased from 0 to ~1000, and I'm poised to continue competitive programming forever!
- He is good at lecturing and thoughtful
- Extremely approachable.
- He still needs to work on making a good curriculum that fosters growth for all students. Right now the curriculum is catered towards advanced students.
- Prof Lim REALLY cares about his students. I'm coming up on graduation and have taken many classes, but never had a professor who made himself so approachable like Professor Lim. Also appreciate how he's flexible on the class based on student suggestions.
- Carefully designed course structure
- The professor goes out of his way to help me greatly and help me grow professionally. I'm grateful for his consistent devotion of time in me!
- He's very cool.
- He is ver encouraging and very smart.
- He is good
- He is clearly very passionate about the subject and is very invested in his students' success. He goes out of his way to help us in our job search.
- Yongwhan genuinely cares about the growth and success of his students. He emphasizes learning on all levels and is accommodating for his students. His delivery of content and level of understanding is unparalleled in the department, and he really makes his students feel understood and appreciated.
- Prof. Yongwhan is probably the most helpful professor there ever was. He assists all the students in every step of their career. Apart from that he is very knowledgeable.

18 - Comments

Akash Nayar

Response Rate 3/164 (1.83%)

- very responsible and knowledgeable, easy to approach
- Akash was so kind and approachable.
- na

18 - Comments

Andrei Coman

Response Rate 4/164 (2.44%)

- very responsible and knowledgeable, easy to approach
- Andrei was the cold and stoic CP killer. He taught me a lot!
- Andrei is probably one of the smartest guy I have ever met. The level of detail he understands in algorithms is very rare.
- na

18 - Comments

Ethan Turok

Response Rate 4/164 (2.44%)

- DP office hours were very fun and instructive. I felt like I really developed my problem solving skills. I wish we went at a bit faster pace though. :)
- Not much interaction
- Ethan was also very approachable.
- na

Hanming Yang

Response Rate 5/164 (3.05%)

- You were always very eager to discuss problems and solutions to recent contests. Thank you for a great semester!
- Not much interaction
- I never went to Hanming's OH but I'm sure he was great!
- He is good
- na

18 - Comments

Kevin Yang

Response Rate	4/164 (2.44%)
----------------------	---------------

- Not much interaction
- Kevin gave great explanations in his OH.
- Kevin, unlike other TAs, tends to supplant a presentation by offering his own insights. And he always concludes a question with some one-liners to make sure we have some solid take-aways from it.
- na

Venkat Ramamoorthi

Response Rate	6/164 (3.66%)
----------------------	---------------

- Amazingly kind and compassionate TA
- OH's were always a blast, and you were always available on discord to answer any and all questions at a moment's notice.
- Not much interaction
- Great TA, always available, answered one of my questions at 3AM one time, which is insane. Super dedicated to the course. Also participates in the contests and problem sets with us, so he's never far removed and can answer questions that we'd have more effectively
- Loved the positive vibe Venkat brought to the class!
- na
